Summary

I love to dig into problems and solve them with modern technology.

I enjoy learning about many executives throughout my career in engineering and Front-End Development. My personal and professional experiences have taught me the following about myself:

I educate, refine and drive myself to be a better person
I am constantly learning because I never settle
I stay calm when faced with adversity
I focus on making high-quality decisions

I enjoy meeting new people and making friends.

I love applying responsive design principles and watching my web pages shrink into mobile screens and still look amazing. I think in a way I'm kind of like those web pages.

My specialties include quickly learning new skills and programming languages, responsive design principles, User Experience (UX), website optimization. So far I have JavaScript, HTML5, CSS3, React, jQuery, Bootstrap, d3.js, sass, pug, command line, and Git/GitHub under my belt. I've started learning Node.JS and Express.JS. I'm still enthusiastically grabbing onto any other programming languages, frameworks, or principles I can integrate into the coding web in my head.

I worked with slack and know about Agile Methodologies and Trello.
